

Fast. Effective. Easy to Use.

See it work quickly right before your eyes!

ProMelt
ultra
ICE MELTER

Product Overview

ProMelt ULTRA is a unique blend of sodium and magnesium chlorides combined with an anti-corrosive solution, specifically designed to outperform other ice control products. *ProMelt ULTRA* is extremely effective on ice and snowpacks. *ProMelt ULTRA*'s appealing color enables you to see where the product has been applied and helps prevent over-application. Usage is generally 25% less product and applied half as often, compared with other salt-based de-icers.

Product Features

ProMelt ULTRA is part of the complete line of ground-breaking and environmentally responsible products by *innovative surface solutions*.

ProMelt ULTRA works better than other popular ice melters because it is:

- Fast Working - Penetrates ice and snowpacks more effectively thereby increasing the speed and effectiveness of the melting process
- Environmentally Friendly - Reduces the environmental damage done by rock salt
- Improves Working Temperatures - Works better at lower temperatures (-13°F or -25°C)
- A Superior Alternative - Has all the benefits of sand without the mess and expense of cleanup
- Corrosion Inhibited - Drastically lowers corrosion damage associated with rock salt usage

READY WHEN NATURE STRIKES. GUARANTEED.

Highest Benefit = 5 Lowest Benefit = 1	Calcium Chloride pellets	ProMelt Ultra Melting Capacity (-13°F or -25°C)
De-icing Rate- to work (0° F at 5 min.)	3	5
Effective De-icing Temperatures	5	3
Melting Capacity at 0° F	5	3
Corrosion Level	1	4
Vegetation Safety	2	3
Overall Value	16	18

Highest Benefit = 5 Lowest Benefit = 1	Potassium Chloride Granules	Sodium Chloride Rock Salt	Magnesium Chloride Hexahydrate Crystals
De-icing Rate- to work (0° F at 5 min.)	1	2	4
Effective De-icing Temperatures	1	2	4
Melting Capacity at 0° F	1	2	4
Corrosion Level	2	3	5
Vegetation Safety	4	1	5
Overall Value	9	10	22

Product Comparison

ProMelt ULTRA contains a blend of naturally occurring crystal and liquid ice-melt products. *ProMelt ULTRA* is created through the application of a high performance, liquid de-icer added to a blend of fine and coarse crystal ice melt by using "prewetting" technology. Through the prewetting process, this high performance, granular ice melt can be made to melt faster, last longer and perform better.

The charts to the left compare several concentrated products with *ProMelt ULTRA*, a blended ice-melter. With comparative numbers like these, *ProMelt ULTRA* is your clear choice amongst all the blended products on the market today.

Sources: De-icing rate - Paradigm Chemical, LLC, study, May 2002 and Illinois field test January 2003. Effective de-icing temperature - manufacturer's sale literature and lab studies. Melting capacity (ml of melted ice) - Paradigm Chemical, LLC, study, May 2002. Corrosion level - University of Utah study, November 1994; Paradigm Chemical, LLC, study, 1999-2003. Vegetation safety - University of Utah study, Iowa Turf Study, 1998.

Product Application

For driveways and walkways, evenly sprinkle 2 to 2 1/2 oz (1/4 to 1/3 cup) of *ProMelt ULTRA* per square yard. Melting begins immediately and continues longer than standard rock salt products. Shovel off slush and re-apply if necessary. Thick accumulations of ice may require additional applications.

Keep *ProMelt ULTRA* in vehicles to use in case of snow or ice storms. Spread generous amounts to create a path to escape from slick parking lots or other parking areas. When not in use, ensure bag is closed and store in a dry place.

For more information on *ProMelt ULTRA* or our comprehensive solutions-based product line, please contact *innovative surface solutions* at **1 800 257-5808** or visit us online at **www.innovativecompany.com**.
